## INDUSTRIAL NATURAL GAS CONSUMERS OPPOSE SENATOR UDALL-LANDRIEU BILL TO EXPEDITE LNG EXPORTS

The Industrial Energy Consumers of America (IECA), opposes S. 2494, "The Natural Gas Export Promotion Act of 2014."

"With domestic natural gas prices forecasted to rise over 160 percent in ten years, expediting LNG exports beyond what has already been approved by the U.S. Department of Energy is reckless public policy that will drive up the cost of natural gas and electricity to all consumers and seriously damage manufacturing competitiveness and jobs," said Paul Cicio, President of the IECA.

The DOE has already approved exports volumes of LNG to non-free trade countries that surpass the current largest LNG exporter in the world, Qatar.
