"IECA Applauds Senate Passage of the Energy Savings and Industrial Competitiveness Act"

On behalf of the Industrial Energy Consumers of America (IECA), we applaud passage of the "Energy Savings and Industrial Competitiveness Act" as an Amendment to H.R. 4850 in the Senate and urge the House of Representatives to pass it upon its return. The legislation will help identify federal and state policy barriers to increased industrial energy efficiency, demand response and greater use of combined heat and power.

"The legislation's initiatives will pay big dividends in the future," said Paul N Cicio, President of the Industrial Energy Consumes of America. Energy efficiency is a powerful tool to increasing manufacturing competitiveness, jobs, capital investment, and emission reductions.

It is an absolute fact that federal and state energy efficiency barriers exist. This bill takes an important first step in requiring the DOE to identify those barriers and provide guidance, identify past successful industrial energy efficiency policies, and provide cost-effective policies used by other manufacturing-based countries.

We applaud Senators Shaheen and Portman for their leadership and tremendous support for the manufacturing sector of the United States.

The Industrial Energy Consumers of America is a nonpartisan association of leading manufacturing companies with \$710 billion in annual sales and with more than 930,000 employees worldwide. It is an organization created to promote the interests of manufacturing companies through advocacy and collaboration for which the availability, use and cost of energy, power or feedstock play a significant role in their ability to compete in domestic and world markets. IECA membership represents a diverse set of industries including: chemical, plastics, steel, aluminum, paper, food processing, fertilizer, insulation, glass, industrial gases, pharmaceutical, and brewing.
